

USER GUIDE (Short version)

1. Tobogganing should **ONLY** be carried out with an approved **HELMET**, suitable footwear (not ski boots!) and suitable clothing.
2. Test the steering and the brakes **BEFORE** every toboggan run.
3. **ONLY** toboggan in a seated position.
4. Steer with your feet by moving the steering guide. **NEVER** take your feet off the steering guide (this is the difference to “normal” tobogganing). You could get into a skid and take a tumble.
5. Brake **ONLY** with your hands. Maintain a firm grip on the brakes with both hands and pull them **UP** towards your body as you sledge. When you want to brake, press the brakes **DOWN** firmly on both sides.
6. Exercise care when tobogganing, especially on your first few runs, and begin by ensuring you are familiar with the operation of the sledge. Do not move on to steeper slopes and more technically demanding runs before your skills have reached an appropriate level.
7. Take care to avoid endangering others. You alone are responsible for the speed you reach and your course.
8. Only the Junior model: Adults who are responsible for children must ensure that sledges used by children have been correctly set up for them.
9. Only the DUO model: The pilot sits at the front. Only the pilot steers and brakes. The passenger sits behind the pilot, resting his or her feet on the runners and keeping a grip on the hand-holds at the back.
10. The models SOLO and JUNIOR may only be used by one rider at a time.
11. **NEVER** leave the sled standing upright (on its rear end) in the snow. It could injure somebody – particularly a child – as it topples over.
